

GHOST 2 SMART AIRSOFT GUN

CARBONTECH SMART AIR SOFT GUNS

EVOLUTION

ITALIAN AIRSOFT EXCELLENCE

SMART AIRSOFT GUN

FAST PROGRAMMING: All gun functions are programmed easily via trigger without disconnecting the battery. Changing configuration is super-fast and it can be done in a few seconds also during games.

FUNCTIONS

BINARY TRIGGER: The gun fires one BB when the trigger is pulled and one BB when the trigger is released, enabling the user to shoot in semi auto at double speed. A great feature for Speedsoft games or for those games where full auto is not allowed.

3 BURST SEMI: The gun fires a burst of 3 BB's when the selector is on SEMI.

3 BURST AUTO: The gun fires a burst of 3 BB's when the selector is on AUTO.

5 BURST AUTO The gun fires a burst of 5 BB's when the selector is on AUTO.

RAMPING FULL AUTO: When the selector is on AUTO the gun fires 1 BB in semi-auto mode, keeping the trigger pulled after the first shot the gun switches to full auto and continues firing until the trigger is kept pulled.

ACTIVE BRAKE: Two powerful AB Mostets use the motor as an electromagnetic brake to stop the gears in the wanted position avoiding double shots and piston bounce when using high voltage batteries. The active brake can be disabled for Speedsoft games.

SNIPER DELAY: The gun simulates the use of a bolt-action rifle by enabling a one second break between shots. During the break the optical signal remains active.

LOW VOLTAGE PROTECTION: The battery is constantly monitored and the power is cut-off if the Voltage falls below the security level to avoid over-discharge that may damage the electronic unit.

AUTO VOLTAGE DETECTION: The gun automatically recognizes the batteries Voltage.

AUTO CYCLE CONTROL: The unit stops the piston only after a shooting cycle is completed and always in the same position increasing shooting consistency.

AUTO MOTOR DIAGNOSTIC: The unit constantly checks the motor parameters. In case the motor parameters go out of range, the unit enters in Protection Mode to avoid damages, an optical signal and a vibration are activated in order to alert the user.

Germany version: Upon request the guns can be ordered in two versions:

1 - Power limited to 0.5 Joule with all functions active

2 - Semi Auto only with all full-auto and burst functions disabled.
